

The screenshot shows a Windows PowerShell window running on a Windows operating system. The title bar of the window reads "Windows PowerShell". The command prompt shows the user's directory path: "C:\Users\james>". Inside the window, the output of the Python script "motorcycles.py" is displayed, showing three motorcycle models: Honda CBR600RR, Ducati Panigale V4, and Harley-Davidson Street Glide.

```
C:\> Users > james > OneDrive > Desktop > motorcycles.py > ...
1 motorcycles = ["Honda CBR600RR", "Ducati Panigale V4", "Harley-Davidson Street Glide"]
2 print(f"I would love to own a [Honda CBR600RR].")
3 print(f"I would love to own a [Ducati Panigale V4].")
4 print(f"I would love to own a [Harley-Davidson Street Glide].")
